

Working with USB devices

Identifying and locating USB devices

These widely used commands can be used to list and learn about connected USB devices in Linux.

```
lsusb  
dmesg  
dmesg | less  
dmesg | grep ttyUSB  
usb-devices  
lsblk  
sudo blkid.  
sudo fdisk -l
```

```
lsusb
```

list the device tree to get port:device

```
lsusb -t
```

list all the details about a device at port 1: device 3

```
lsusb -v -s 1:3
```
